

Council for Scientific and Industrial Research

MEMBERS

Executive:

Sir George A. Julius, Kt., B.Sc., B.E.
 (Chairman),
 A. C. D. Rivett, Esq., M.A., D.Sc.
 (Deputy Chairman and Chief Executive Officer),
 Professor A. E. V. Richardson, M.A., D.Sc.

Chairmen of State Committees:

Professor R. D. Watt, M.A., B.Sc.
 (New South Wales),
 Russell Grimwade, Esq., B.Sc.
 (Victoria),
 Professor H. C. Richards, D.Sc.
 (Queensland),
 Sir Walter J. Young, K.B.E.
 (South Australia),
 B. Perry, Esq.
 (Western Australia),
 P. E. Keam, Esq.
 (Tasmania).

Co-opted Members:

Professor E. J. Goddard, B.A., D.Sc.,
 Sir David O. Masson, K.B.E., F.R.S., &c.
 Professor H. A. Woodruff, M.R.C.V.S., &c.

Secretary:

G. Lightfoot, M.A.

314 Albert Street,
 East Melbourne,
 Victoria

COMMONWEALTH OF AUSTRALIA

Council for Scientific and Industrial Research

METEOROLOGICAL DATA For Certain Australian Localities

Prepared in collaboration with the
Commonwealth Meteorological Bureau

MELBOURNE, 1933

Registered at the General Post Office, Melbourne, for transmission by post as a periodical

C.5369.

H. J. Green, Government Printer, Melbourne

FOREWORD.

For some time past, various investigators on the Council's staff have made extensive use of the meteorological data collected by the Commonwealth Meteorological Bureau of the Commonwealth Department of the Interior. Such data have been of value in a number of directions especially in connexion with researches concerning many different subjects in the fields of soils, entomology, plant industry, animal health, &c.

In many cases the meteorological information required by these investigators has not been published. It has accordingly been thought that the publication of selected Australian meteorological data will be of considerable value to a large number of investigators, not only those associated with the Council but those connected with the various agricultural and other scientific organizations throughout Australia.

The Council accordingly discussed the question with the Meteorological Bureau, and suggested that a publication containing selected meteorological information might be issued by the two bodies in co-operation. This proposal met with a ready response from the Bureau, and the Pamphlet that follows is the result. The basis of co-operation arranged was that the Bureau would provide the data and arrange it in suitable form for publication, and that the other costs would be borne by the Council. The latter body desires to acknowledge its cordial appreciation of the helpful attitude adopted by the Bureau, without the co-operation of which the production of the publication would have been quite impossible. The Council is also indebted to the Bureau for the preparation of the folding map at the back of the pamphlet, which will be found to increase its value very appreciably.

EXPLANATORY.

The subject-matter has been arranged by the Commonwealth Meteorological Bureau in Meteorological Divisions, and these have been given numerically as the centre heading to each group of stations, e.g., Division 1 is North Kimberley, Division 2 is East Kimberley, and so on. The geographical positions of the various divisions and the locations of some of the individual stations are shown on the folding map which is included at the end of the publication.

The stations given within any particular division are not necessarily all the existing meteorological stations within that division, but they are typical instances selected by the Bureau in order that the publication might be of a size possible to produce with the funds available. An index of stations has been prepared for the assistance of those interested in any particular station as distinct from its division.

In addition to the name of the station, its latitude, longitude, and height above sea-level are given in each case and in that order, e.g., "Port George IV. $15^{\circ} 25' S.$ $124^{\circ} 43' E.$ 1950'" denotes that the latitude of "Port George IV." is $15^{\circ} 25' S.$, that its longitude is $124^{\circ} 43' E.$, and that its height above sea-level is 1950'. In some places the figures for height above sea-level are accompanied by an asterisk; in other places they are accompanied by a cross. The asterisk indicates that the height given is that of the local railway station; the cross indicates that the height given is an approximate one.

The various meteorological data have also been signified by a number in the first column on the left in each case. Of these

Line 1 gives the normal mean maximum temperatures.

Line 2 gives the normal mean minimum temperatures.

Line 3 gives the normal mean relative humidities (saturation = 100).

Line 4 gives the average rainfalls in points (100 joints = 1 inch).

The column "No. of Years" denotes the number of years over which the various data have been calculated, the last year in each case being 1931.

INDEX.
